

INTERNET AND NETWORK

Connecting networks, securing data and providing solutions for your business.

For over two decades, we've worked across Ontario to ensure its businesses have the means to connect. Regardless of what your network goals are – improve performance, build resilience or increase capacity – we can help.

Expanding your network and capacity, without expanding your risk.

When it comes to connectivity, every organization has different priorities from the next. For some, performance and security are most important, while others are looking for flexibility and support or require a strong, consistent connection across multiple locations.

Whatever your objectives are, we can address your needs in the following ways:

HIGH PERFORMANCE

Transfer large amounts of data quickly and securely through a low-latency, high-bandwidth network connection. Our MPLS, Ethernet and Wavelength services provide dependable, high-performance bandwidth for the most demanding workloads.

BUSINESS RESILIENCE

Pivot quickly when priorities and circumstances change while continuing to support your staff and operation with a multi-layer, fault-tolerant network architecture, diverse path routing and innovative solutions that provide business agility.

SECURITY

Connect freely while keeping all data secure through carrier-grade encryption, a private line and optional DDoS protection.

FLEXIBILITY

Select from a large range of bandwidth options, geographic route selections and physical interfaces to develop customized connectivity solutions.

SUPPORT

Engage with a single point of contact in our world-class Client Engagement Centre, which offers concierge access to all of Acronym's services and departments.

HIGHLY SKILLED STAFF

24/7/365 access to dedicated sales, engineering, technical support and service delivery teams.

It's your business. Select the dependable, high-performing network that's right for it.

Our extensive fibre-optic network spans more than 8,700 km, which makes it possible for organizations like yours to connect facilities and offices through diverse or remote locations.

Internet with DDoS Shield	Connect to the internet across multiple upstream interconnects. Plus, DDoS Shield can be added to quickly and seamlessly protect against DDoS attacks.
Secure SD-WAN	Faster connectivity and better branch-to-cloud network performance with built-in cybersecurity protection.
MPLS	Business-grade network availability and infrastructure redundancy for the most demanding workloads.
Ethernet	Scalable and flexible network services up to 100 Gbps.
Wavelength	High-performance transport network connectivity across protected or unprotected circuits.
Dark Fibre	Secure, unlit transportation network services across Ontario.
Tower Attachment	Utility-grade and colocation options across Ontario to expand coverage and meet the needs of carriers, service providers and public-sector organizations.
