# VEEAM CLOUD CONNECT WITH RANSOMGUARD

CLOUD

Protect your most valuable asset

It's the driving force of your company—your **customer**, **employee**, **financial** and **product data**. You want to be sure it's safe and protected, even when something goes wrong.

It's why we've created the Veeam Cloud Connect solution with built-in RansomGuard protection. In case of emergency, it'll ensure that your systems are secured and your data retrievable.

WHY IT MATTERS

Life is unpredictable. There are a number of different events that will require your service to be restored, including:

- Floods, fires and natural disasters;
- Data corruption from malware attacks; and
- Equipment failures from ransomware attacks.

In fact, ransomware and other cybercrimes are projected to cost $10.5 trillion per year by 2025[1]. It's why we follow the 3-2-1 rule of thumb for data protection:

Keep **three** copies of your data stored on **two** types of media, with **one** copy offsite.

Integrating Veeam Cloud Connect with RansomGuard saves you time, money and resources. This secure, cloud-based backup repository is within a data-sovereign data centre and features an additional inaccessible directory for extra security. No need to spend resources on a second site, additional storage or costly egress fees for regular recovery testing; Acronym maintains the stability and scalability of the storage infrastructure for you.

x3

Create 3 copies of data
(1 primary and 2 backups)

x2

Keep data on at least 2 types of storage media
(local drive, NAS, tape, etc.)

x1

**Store 1 of these offsite**
(secure storage, cloud, etc.)

Veeam Cloud Connect

Customer On-Premises Infrastructure

Acronym's Infrastructure

HOW IT WORKS

1. Your Veeam server is located on your company's property. It will back up and consolidate any data, prior to the data being saved to the offsite Cloud Connect-enabled data vault.

2. A copy of your replicated data is then stored within a secure, Tier II data storage fabric.

3. If and when you need to recover your data, the server located on your property restores the backup to the server from the cloud. If your server is not accessible, we can restore it for you.

4. If the worst-case scenario occurs and your backups are deleted, an extra copy of your recycle bin is kept within a private directory. This directory cannot be tampered with and only an authorized customer can request for their data to be restored.

FEATURES OF VEEAM CLOUD CONNECT

Acronym delivers powerful, reliable solutions to help you avoid the risk of data loss. With our Veeam Cloud Connect solution, you get:

- **Hosted offsite backups:** Store your offsite backups in our hosted cloud repository. They can be accessed through a secure SSL connection and require no additional licensing

- **Modern backup architecture:** Leverage Veeam's industry-leading backup technology, together with our secure and scalable cloud repository, for cost-effective, easy-to-deploy backups and restorations

- **RansomGuard protection:** Get an extra layer of protection through an additional inaccessible directory

- **End-to-end encryption:** Rest easy knowing that all data is encrypted before it leaves your network, while in flight and at rest

- **Complete visibility and control:** Whether in your server or within our cloud, with your Veeam console you can manage and track your on-premises and cloud backups with the confidence that all of your data remains in Canada and is governed by Canadian data privacy laws
